### The experience of Malta with Economic Instruments and the EEA/OECD Database

**Marie Briguglio** 

#### **PART 1: BACKGROUND**

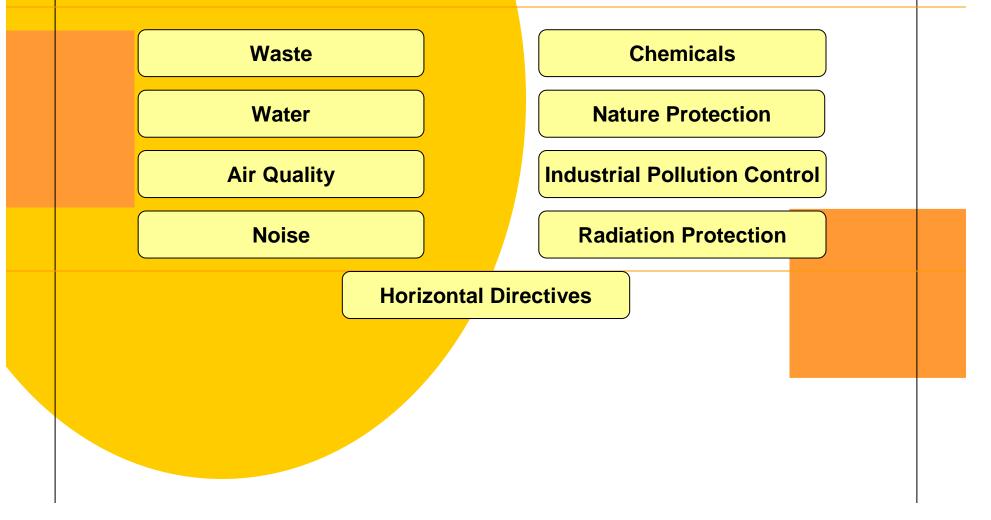

# What's Malta like?

403,000 population 316 square km 1275 persons per sq km **1.2 million tourists 280,000 vehicles** 50% of water supply 23% built up land **49% Agricultural land** 22% Natural vegetation

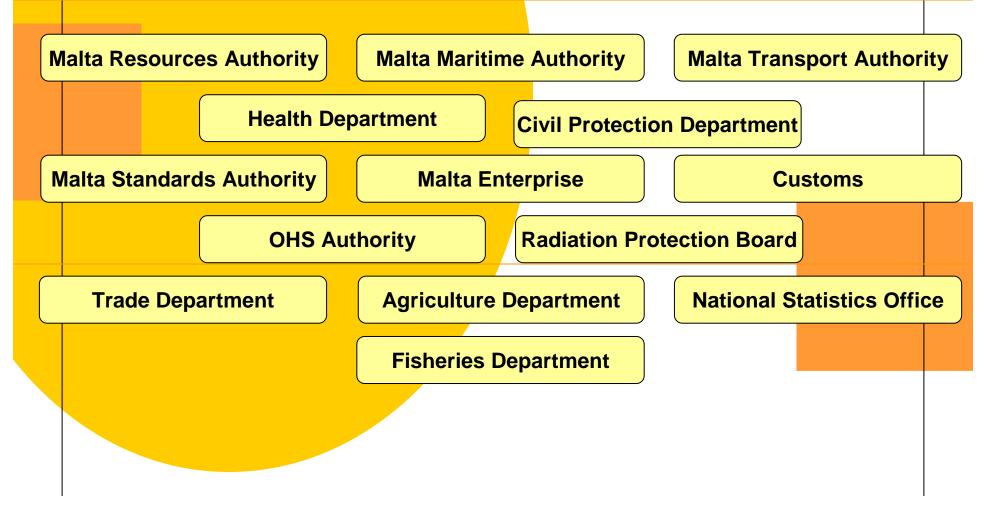

## **Environmental Aims**

MEPA is responsible for the implementation of obligations for apx 200 EU directives, regulations and other policy instruments in the following fields:

# Who is regulating?

Approximately one-third of the EU Environmental Acquis is shared between MEPA and other authorities, inc:

## With what instruments?

### Economic Instruments Command and Control Other Approaches

### **PART 2: THE DRIVE FOR EIs**

## What do we mean by Els?

#### A financial INCENTIVE to shift from environmentally harmful activities to less harmful activities

e.g. environmental charges

- e.g. environmental taxes
- e.g. emissions trading
- e.g. subsidies
- e.g. deposit refund schemes

NB: An Economic Instrument implements the polluter pays principle by internalising negative externalities. "Revenue is a double dividend"

## **Rationale for Els**

To reach environmental objectives in an economically efficient manner

- + Efficient
- + Flexible
- + Offer choice
- + Encourage innovation
- + Generate revenue

NB: revenue is a positive by-product NOT the rationale of Economic Instruments

## **Policy Direction Malta**

- Basic legislative framework for Polluter Pays principle in place since the 90's
- Attempt to shift from indirect to direct environmental taxation pre-budget "A Better Quality of Life 2006-2010"
- Malta's National Reform Programme 2005
- Draft National Sustainable Development Strategy "Encourage further use of economic instruments such as charges, taxes, subsidies, grants, rebates, deposit refund schemes and performance bonds to promote sustainable development in Malta"

## **Policy Direction EU**

Sixth Environment Action Programme 2001:

The promotion of polluter pays principle, through the use of market based instruments, including the use of emissions trading, environmental taxes, charges and subsidies, to internalise the negative as well as the positive impacts on the environment

**1997: Communication on Environmental Taxes + ENVECO** 

**2006: The New Lisbon Strategy** 

**2004: The Communication on Environmental Technologies Action Plan - including removal** of harmful subsidies

**2007: Green Paper on Market Based Instruments** 

# THE EU & THE PPP

Examples of EU Environmental Acquis relating to polluter pays principle:

- 2004/12/EC amending Directive 94/62/EC Packaging and packaging waste
- 2000/53/EC End-of life vehicles
- 2003/108/EC amending 2002/96/EC Waste Electrical and Electronic Equipment (WEEE)
- 2000/60/EC Establishing a framework for Community action in the field of water policy
- 2003/87/EC Establishing a scheme for greenhouse gas emission allowance trading within the Community
- 2003/96/EC Restructuring the Community framework for the taxation of energy products and electricity

## **THE EEA/OECD database**

Revealed gaps in current knowledge on

What instruments exist? What qualifies as an EI? What data have we collected? Are they effective? Transport Is there further scope? Land Energy Housing Marine environment Waste Water **Biodiversity** Industry specific

#### **PART 3: THE RESPONSE: A project!**

## **Project Aim**

"To build the Maltese Government's capacity to devise and implement a package of environmental and economic instruments applying the Polluter Pays Principle in practice"

> **TITLE: Building capacity to Introduce the Polluter Pays principle through Economic Instruments to Implement the EU Environmental Acquis**

## **Project Team**

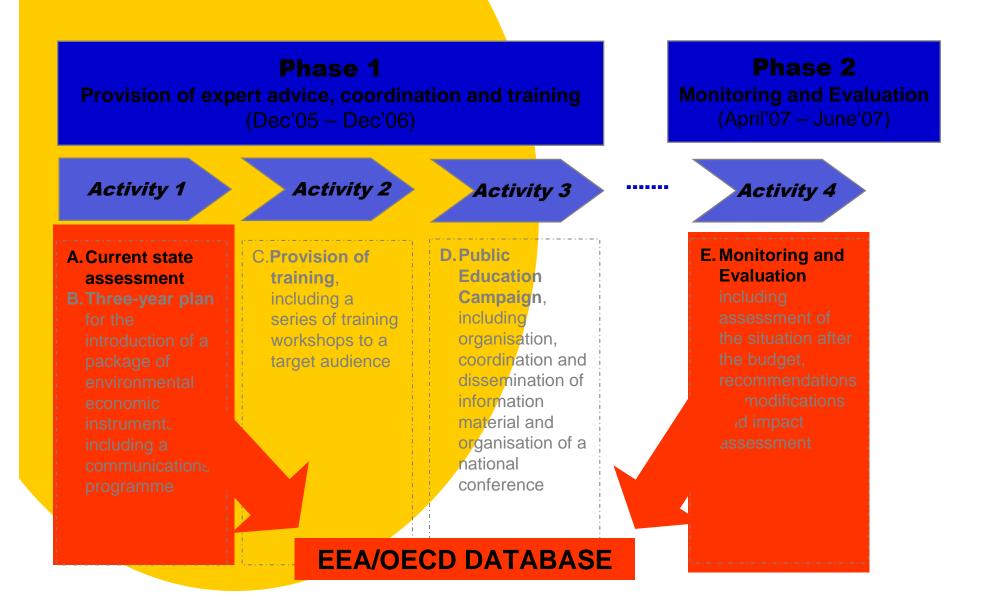

Consultancy Malta EPA Ministry of Finance Other stakeholders / players

## **Expected Results**

This Project EU funded project 'Building capacity to Introduce the Polluter Pays principle through Economic Instruments to Implement the EU Environmental Acquis' will result in:

- 1. A 3 yr plan for introducing a package of EE instruments
- 2. A series of training workshops for government officials;
- **3.** A public awareness campaign on the PPP;
- 4. A national conference addressing all the stakeholders.

## **Project Phases**

## **Project Approach**

Build on Malta's existing EU / international commitments in the EU field, as well as Malta's key priority areas

Make use of international practice and experience

Be sensitive to Affordability, Competitiveness and Social issues.

Aim to come to pragmatic, realisable options that make sense and work

## First Result – A stock take

**Legislative framework largely in place** 

**Significant number of Envt. Rel**ated instruments (appx 46)

Notable attempts, obtaining varying degrees of success, at using economic instruments for environment:

No coherent strategic approach

**Implementation of instruments** fragmented

Implementation and enforcement lacks effectiveness

## Second Result: A plan

Testing existing instruments assessed against list of key criteria and recommending changes

Recommending introduction of new instruments to respond to Malta's key priority needs and based on international experience

## + a Checklist for El Design

- Address important environmental objectives
- Yield significant environmental benefits
- Raise useful revenues
- The extent to which an instrument is likely to be fair
- The likely social effects of an instrument
- The consistency with the overall economic policy
- The cost-effectiveness of an instrument
- Pricing efficiency
- Credibility and understandability by the public
- Capacity to design, implement and enforce

## **Third Result: Training**

An Executive programme - 4 hrs Focused training programme – 8 hours, over 2 days Total Participants:

## **Fourth Result: Communication**

#### Aim

To make the PPP attractive, understandable, acceptable, interesting and to rally public support

To appeal to the economic understanding

Key message

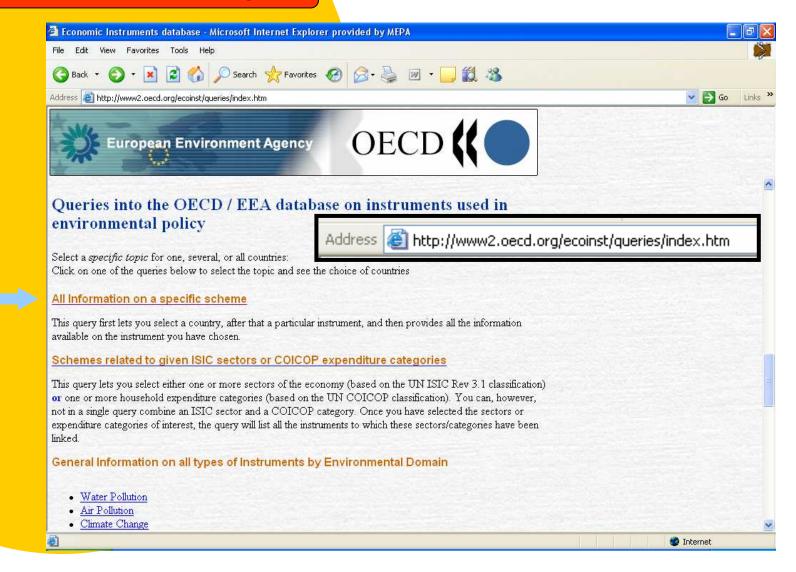

"Tisraqx lilek innifsek"

Click on the item you would like to update.

#### **Some Perceived strengths**

Transparency

One common data repository for the Country

One common data repository for all Countries

Can motivate serious action

Enables updating

Value added through EEA validation

#### Some weaknesses

Keeping track and getting the information

Complex querying but not enough to capture detail

Difficulties of definition of economic instrument

No data on outcome or effect on pollution flow

Not exhaustive

#### **Potential threats**

Partial, out-of-date data renders database unreliable

High maintenance, Low return

Risk of being overtaken by events

### **Opportunities**

One national contact point empowered to be informed

Improve data capture search and query capabilities

Make it reach out - create useful hooks

### The experience of Malta with Economic Instruments and the EEA/OECD Database

#### **Thank You!**
